[Redacted text]

- **Glucose** is the most abundant monosaccharide in nature. It is a six-carbon aldehyde sugar that is found in many fruits and vegetables. It is the primary energy source for most organisms.
- **Fructose** is a five-carbon sugar found in many fruits and honey. It is sweeter than glucose and is primarily found in fruits and honey.
- **Galactose** is a six-carbon sugar found in milk and other dairy products. It is a component of lactose, the sugar found in milk.
- **Mannose** is a six-carbon sugar found in many fruits and vegetables. It is a component of many glycoproteins and is important for cell signaling.
- **Xylitol** is a five-carbon sugar found in many fruits and vegetables. It is a sugar alcohol that is used as a sweetener in many products.
- **Sorbitol** is a six-carbon sugar alcohol found in many fruits and vegetables. It is used as a sweetener and is also used in the production of sorbitol esters.
- **Mannitol** is a six-carbon sugar alcohol found in many fruits and vegetables. It is used as a sweetener and is also used in the production of mannitol esters.
- **Sucrose** is a disaccharide composed of glucose and fructose. It is the most abundant disaccharide in nature and is found in many fruits and vegetables.
- **Lactose** is a disaccharide composed of glucose and galactose. It is found in milk and other dairy products.
- **Maltose** is a disaccharide composed of two glucose molecules. It is found in malted grains and is used as a sweetener in many products.
- **Trehalose** is a disaccharide composed of two glucose molecules. It is found in many organisms and is used as a storage sugar.
- **Starch** is a polysaccharide composed of many glucose molecules. It is a major storage carbohydrate in plants and is used as a food source for many organisms.
- **Glycogen** is a polysaccharide composed of many glucose molecules. It is a storage carbohydrate in animals and is used as a source of energy.
- **Cellulose** is a polysaccharide composed of many glucose molecules. It is the most abundant carbohydrate in nature and is a major component of plant cell walls.
- **Chitin** is a polysaccharide composed of many N-acetylglucosamine molecules. It is a major component of the cell walls of fungi and the exoskeletons of arthropods.
- **Hemicellulose** is a polysaccharide composed of many different sugar units. It is a major component of plant cell walls and is used as a source of fiber.
- **Pectin** is a polysaccharide composed of many galacturonic acid units. It is a major component of plant cell walls and is used as a thickening agent in many products.
- **Dextran** is a polysaccharide composed of many glucose molecules. It is a storage carbohydrate in some organisms and is used as a source of energy.
- **Inulin** is a polysaccharide composed of many fructose molecules. It is a storage carbohydrate in some plants and is used as a source of fiber.
- **Chondroitin** is a polysaccharide composed of many different sugar units. It is a major component of cartilage and is used as a source of collagen.
- **Hyaluronic acid** is a polysaccharide composed of many different sugar units. It is a major component of connective tissue and is used as a source of collagen.
- **Heparin** is a polysaccharide composed of many different sugar units. It is a major component of connective tissue and is used as a source of collagen.
- **Chondroitin sulfate** is a polysaccharide composed of many different sugar units. It is a major component of cartilage and is used as a source of collagen.
- **Hyaluronic acid sulfate** is a polysaccharide composed of many different sugar units. It is a major component of connective tissue and is used as a source of collagen.
- **Heparin sulfate** is a polysaccharide composed of many different sugar units. It is a major component of connective tissue and is used as a source of collagen.
