What is it?

Yunnan Baiyao is a traditional Chinese Medicine (TCM) formula used for wound healing, as a pain reliever, and to stop bleeding.

Yunnan Baiyao (YNBY; "*White medicine from the Province of Yunnan*" in Mandarin) is a well-known proprietary TCM product. The original formula is believed to contain several herbs, with notoginseng as the major ingredient. It is promoted as a dietary supplement that can be used both externally and internally to stop bleeding, or provide relief from minor aches and pains associated with backache, arthritis, strains, bruises, and sprains.

Lab studies suggest that YNBY and notoginseng may help stop bleeding, and have wound-healing, anti-inflammatory, and antimicrobial effects. However, notoginseng may also have blood-thinning properties.

Studies in humans suggest that YNBY may help treat skin or colon ulcers or reduce uterine bleeding. It also reduced blood loss during some surgical procedures. Case reports suggest that topical YNBY used along with conventional treatments may help reduce bleeding in cancer patients, but additional studies are needed to confirm these effects. This product has not

been studied as a cancer treatment.

What are the potential uses and benefits?

- **Stop bleeding**

Human studies and case reports suggest YNBY may help decrease blood loss during some surgical procedures and in cancer patients, but additional studies are needed.

- **Relieve pain**

Although claimed to relieve pain, scientific data are not available to support this use.

- **Arthritis**

YNBY showed anti-inflammatory effects in lab studies, but clinical studies in humans have not been conducted to establish this use.

- **Oral health**

Lab studies suggest YNBY can reduce the breakdown of bone tissue. Human studies are needed to confirm this effect.

- **Cancer**

YNBY has not been studied as a cancer treatment. Case reports suggest that topical YNBY used along with standard interventions may help decrease blood loss in cancer patients, but clinical trials are needed.

What are the side effects?

Mild: Nausea, vomiting, diarrhea, stomach discomfort, gastroesophageal reflux, and rash
