

PATIENT & CAREGIVER EDUCATION

Understanding Cervical Cancer Screening

MSK Ralph Lauren Center invites you to attend the *Understanding Cancer Screening* free virtual educational series. Throughout the year, hear from our expert panel to answer today's leading questions about how to prevent cervical, colorectal, prostate, lung, and breast cancer and what to expect at cancer screening. This series is an extension of the MSK Ralph Lauren Center's high-quality prevention, screening, and treatment services which are extended to people who are uninsured or underinsured.

HPV is the main risk factor for cervical cancer and is the cause of more than 90 percent of diagnosed cases in the United States. This event will help you know the signs and how to help prevent cervical cancer through screening and vaccination.
